

Ghella Publishes the 2020 Sustainability Report

Ghella announces the publication of its second sustainability report, which shows an **improvement, compared to the previous year**, of some of the main environmental and social indicators of the company.

In 2020 we recorded a **19% decrease in the frequency of injuries and a 20% decrease in greenhouse gas emissions** associated with energy consumption. We have also **reused or recycled 73% of our waste**, seeking opportunities to contribute to a circular economy with our construction activities.

These positive results invite us to continue this path, progressively aligning our ambitions and actions to the expectations of our stakeholders **in a continuous virtuous process of improvement**.

Our **Vice President, Federico Ghella**, commented: "This new edition of the Sustainability Report confirms Ghella's commitment to **transparency** and to **engaging our stakeholders**. **Measuring environmental and social performance** is an essential tool to direct our **actions** towards achieving sustainability **objectives** that are increasingly becoming underlying elements in our corporate strategy."

The Sustainability Report has been realized on a **voluntary** basis, hence demonstrating Ghella's commitment to **transparency** and **Corporate Social Responsibility (CSR)**. It has been written following the guidelines of the **GRI (Global Reporting Initiative) international standard** and contains a description of the commitments undertaken by Ghella, in line with the sustainable development goals (SDGs) of the **United Nations 2030 Agenda**.

The document is available on our website at <https://ghella.com/en/sustainabilityreport>. You can consult it online or download it in a digital format. This is **to ensure maximum dissemination with minimal environmental impact**.

About Ghella

Founded in 1894, Ghella is a leading Company in the construction of major infrastructure projects worldwide, mainly in Europe, the Americas, Oceania and Far East. With its unique skills and experience in underground works, Ghella is involved in the construction of subways, railways, motorways, major roads and significant water and hydraulic works. The use of modern technologies, development of innovative productive methods combined with the highest attention to safety and environmental requirements, have enabled Ghella to complete complex engineering works that have contributed to the Company's dynamic and steady growth as well as the social and economic development of the territories in which it operates.
