

GHELLA SELECTED FOR NEW WATER MAINS PROJECT IN OSLO

9 February 2022 – Ghella, in a joint venture with AF Gruppen, has been awarded the E6 Rentvannstunnel Project by the City of Oslo for the construction of a new water distribution network.

The total value of the contract is NOK 8 750 million excl. VAT (approximately 870M€). Ghella shares 40% of the value of the design and build contract.

The project foresees the construction of Oslo's water distribution between Huseby, Oset and Stubberud.

The new tunnel will be built with several connection points that will connect the existing water mains along the route.

Approximately 11 km of tunnel will be drilled by Tunnel Boring Machine (TBM) and 7 km by traditional method (drill and blast). In addition, the JV shall build clean water basins and a pump station.

The works/contract is a part of the new water supply project that will ensure 100% redundancy for the current potable water supply infrastructure for the city of Oslo.

The work is planned to start in April 2022 and will be completed in November 2027.

About Ghella

Founded in 1894, we are a global reality of primary importance in the construction of large public projects. Specialized in underground excavation and tunneling works, we realize important infrastructures such as subways, railways, highways, and hydraulic projects. Over the course of 150 years, we have built over 130 tunnels and connected more than 1,000 km of highways, railways, and subways. We believe in a business model focused on leaving a better world to the next generations. We build to the highest standards, with innovation and for sustainability, utilizing advanced technologies and state-of-the-art construction methods, supported by a continuous process of staff training. We aid economic growth and social development in all the territories in which we operate.
